

QuickX: Quickest, Cheapest and Cross-Blockchain Transfers

Transactions made faster

QuickX is a new protocol designed specifically to cure the many fatal flaws that plague blockchain and cryptocurrencies today. It accelerates the transaction speed, dissolves the interoperability problem between different cryptocurrencies and scalability and also relieves the transaction fees.

Now make instantaneous transactions for all your blockchain assets just like you do with your fiat money. You can enjoy the perks of cryptocurrencies and blockchain without facing its stinging drawbacks.

The Problem

- Speed
- Transaction costs
- Scalability
- Interblockchain Transactions

The Solution - QuickX Protocol

QuickX is the magic fix we have all been looking for: a safe and secure platform which will accelerate cryptocurrency payments and allow them to walk toe-to-toe with the fiat money.

- A patent-pending technology
- Core Idea
- Pooling facilitators

Real-Time Applications

Multicurrency wallet

Multicurrency Debit card

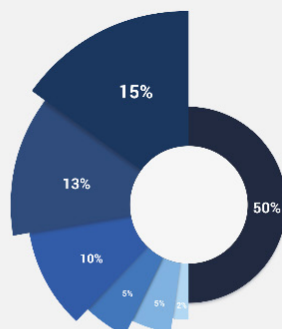

Cryptocurrency swap

Payment gateway

Token Sale

Available QCX for crowdfunding : 250,000,000

Token price

1 ETH = 7500 QCX

Participation via ETH

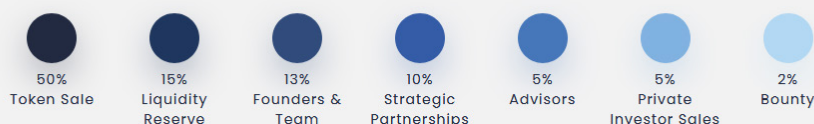

Quickx

Decimals : 8

Symbol : QCX

Type : Utility

Blockchain : Ethereum ERC-20
